

Flexi Ancillary Products

Pump House can provide a range of mounting solutions. The mounting blocks can be used as an option to mount an air conditioning units or air source heat pump. They reduce vibration and are supplied with fixings for a simple, rapid installation. The EVA™ Pads are designed to eliminate vibrations, these pads consist of a polymeric foam core laminated with two ribbed 90 degree opposed rubber sheets. The rubber and cork strips are a low cost option for mounting any type of equipment where vibration and sound dampening might be an issue. Securing a unit to the family of flexi foot with strut with the fix packs offers a speedy solution, furthermore we can provide a fix clamp to add extra stability to the foot by providing the installer with an option to secure it to the floor.

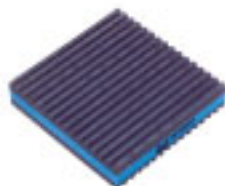

Mounting Blocks

- Lightweight
- 100% rust free
- UV stabilised
- Reinforced PVC
- Anti Slip Strips
- Three sizes available
- SWL upto 240kg

- CMB-350 - 350mm
